Background - Why this research?

How GenAI Reshaped Knowledge Management Research with the Launch of ChatGPT

Literature Review - 1

- We did a search with 4 GenAI (Copilot, Perplexity, Deep Seek, and ChatGPT) on research work that are related to our topic
 - Focusing on literature published in 2025 and 2026
-
1. Brusco Pletsch, A. L., Tonial, G., Matos, F., & Lauermann Koch, L. (2026). Digital transformation: the **role of generative AI in the evolution of knowledge management systems**. *Journal of Knowledge Management*, 1–27.
<https://doi.org/10.1108/JKM-09-2025-1398>
 1. Cerchione, R., Liccardo, G., & Passaro, R. (2026). **Artificial knowledge generation: investigating the revolutionary role of generative AI in knowledge management**. *Journal of Innovation & Knowledge*, 11, 100866.
 1. Goncalves da Silva, C. A., & Gregus, M. (2025). The **impact of ChatGPT Enterprise on knowledge management: Opportunities, challenges and implications**. *Communications of the IBIMA*, 2025, Article 4638525.
<https://doi.org/10.5171/2025.4638525>

Literature Review - 2

- We then used GenAI to summarize the literature into a few main points
- From Storage to Orchestration
- Governing Artificial Flow
- Human–AI Co-Creation
- A New KM Agenda

Literature Review - 3

- **From Storage to Orchestration**

GenAI has shifted KM from static repositories to dynamic knowledge orchestration. KM is no longer only about storing and retrieving what employees know, but about generating, recombining, validating, and mobilizing knowledge in real time through AI-enabled systems (Brusco Pletsch et al., 2026; Cerchione et al., 2026).

Literature Review - 4

- **Governing Artificial Flow**

A central new challenge is managing the artificial flow of knowledge. Because GenAI can produce synthetic summaries, recommendations, and draft insights at scale, KM must now govern not only human knowledge flows but also machine-generated knowledge—especially in terms of reliability, accountability, and reuse (Cerchione et al., 2026; Goncalves da Silva & Gregus, 2025).

Literature Review 5

- **Human–AI Co-Creation**

The real transformation is not automation alone, but human–AI co-creation. GenAI strengthens knowledge recognition and application, yet organizations still face difficulties in assimilating AI-mediated knowledge into routines, decisions, and organizational learning (Brusco Pletsch et al., 2026).

Literature Review 6

- **A New KM Agenda**

Post-ChatGPT, KM research is being redefined around governance, validation, and strategic use. The field is moving beyond a storage-centric logic toward a model in which competitive advantage depends on how effectively organizations manage and govern continuously generated artificial knowledge (Brusco Pletsch et al., 2026; Cerchione et al., 2026; Goncalves da Silva & Gregus, 2025).

Literature Gap

- KM research (with Pre and Post ChatGPT comparison) is lacking

What exactly was examined in our study?

Corpus

Two leading KM journals (*Journal of Knowledge Management, The Learning Organization*)

Inclusion Criteria

- The studies had to be articles (750) or review articles (68) published in the two selected core journals (*Journal of Knowledge Management* and *The Learning Organization*)
- The studies had to be indexed in the aforementioned databases and accessible via the Education University of Hong Kong library portal.
- The studies were included based on manual issue-by-issue retrieval to ensure full coverage of the defined time windows.

Exclusion Criteria

- Editorials and books were excluded due to the lack of peer review.
- Articles published during the immediate transition period after the launch of ChatGPT (i.e., from December 2022 to July 2023, an eight-month period) are excluded, in order to reduce the potential contamination of publication lag on the analysis.

Note: These two journals were selected on the basis of their recognised standing in the field, as reflected in their Impact Factor, SCImago Journal Rank (SJR), and h-index.

Digitalization of operations for sustainable value creation by SMEs: analysis of barriers in the era of Industry 4.0

Harshad Sonar, Nikhil Ghag, Rajesh Kumar Singh, Tugrul U. Daim and Swati Agrawal

Harshad Sonar is based at Symbiosis Institute of Operations Management (SIOM), Constituent of Symbiosis International (Deemed) University, Nashik, India.

Nikhil Ghag is based at Operations and Supply Chain Management, Indian Institute of Management (IIM), Mumbai, India.

Rajesh Kumar Singh is based at Management Development Institute, Gurgaon, India.

Tugrul U. Daim is based at Portland State University, Portland, Oregon, USA, and Chaoyang University of Technology, Taichung, Taiwan.

Swati Agrawal is Manager at Ernst and Young (EY), Mumbai, India.

Abstract

Purpose – The digitalization of operations within small- and medium-sized enterprises (SMEs) remains a significant challenge, particularly in conceptualizing and assessing their readiness for such transformation in the context of Industry 4.0 (I4.0). While there is considerable literature on digitalization, limited attention has been paid to how SMEs can effectively create long-term value through digitalization. Hence, this study aims to identify the challenges for digitalizing operations and present an integrated framework to evaluate the level of preparation for I4.0 uptake for SMEs based on their capabilities to cross boundaries to create sustainable value.

Design/methodology/approach – The majority of critical barriers concerning digitalization of operations have been derived from the literature and decided upon through fuzzy Delphi. Contextual interrelationships of the barriers, which have been derived, are established by mixing the “Decision-making trial and evaluation laboratory method” (DEMATEL) and “Interpretive structural modeling” (ISM) technique. Sensitivity analysis is conducted to verify the model’s robustness.

Findings – Fear of job losses and absence of an attitude toward change are seen to be the principal obstacles to digitalization in the age of I4.0. Organizational culture, inadequate digital competences and poor financial resources are also seen to be key obstacles that prevent SMEs from harnessing digitalization for sustainable value creation. Moreover, structural obstacles like old technology infrastructure and absence of strategic alignment also hinder the advancement of digitization.

Practical implications – Insights from this work will help practitioners in strategy formation to identify and pinpoint significant barriers to digitalization. The framework developed offers a systematic approach to prioritizing these barriers based on their interdependence and causal relationships, enabling decision-makers to tackle the most critical issues first. This study provides a different aspect of digitalization for stakeholders to better understand the interrelationship between the barriers to the digitalization of operations for sustainable value creation in the era of I4.0. It offers specific guidance on overcoming resistance to change, upgrading digital skills and enhancing strategic focus within SMEs.

Originality/value – Originality of this work lies in identification of barriers from Indian perspectives for digitalization of operations in the I4.0 era for long-term sustainability and value creation. This study uniquely integrates ISM and DEMATEL methods to model the intricate relationships among various barriers. It offers a deeper understanding of the causal structures influencing digitalization. Moreover, it bridges a significant gap in the literature by highlighting the operationalization of I4.0 concepts within SMEs and addressing the challenges they face in creating sustainable value through digitalization.

Keywords Industry 4.0, Digitalization, Operations, Value creation, Fuzzy Delphi, SMEs

Paper type Research paper

Table 1. Top 15 Rising Keywords — ranked by growth multiple

Rank	Keyword	Pre (n)	Post (n)	Count change	Growth multiple
1	Digitalization	0	7	+7	New
2	Knowledge Hoarding	0	7	+7	New
3	Innovative Work Behavior	0	6	+6	New
4	Innovation Ambidexterity	0	5	+5	New
5	Social exchange theory	1	12	+11	12.00x
6	Talent management	1	7	+6	7.00x
7	Digital transformation	2	13	+11	6.50x
8	Artificial intelligence	1	6	+5	6.00x
9	Knowledge workers	1	6	+5	6.00x
10	Green innovation	1	5	+4	5.00x
11	Employee engagement	1	4	+3	4.00x
12	Industry 4.0	1	4	+3	4.00x
13	Learning	3	10	+7	3.33x
14	Intrinsic motivation	2	6	+4	3.00x
15	Human resource management	2	5	+3	2.50x

Note. Keywords absent in the pre-launch corpus are ranked by post-launch document count and marked as **New**. Blue highlighted rows = entirely new terms post-ChatGPT.

Yellow highlighted rows = sharpest increase at least 5 times or more.

[Innovation ambidexterity - the ability of an organization to simultaneously exploit existing capabilities for incremental innovation & explore new opportunities for innovation]

Table 2. Top 15 Declining Keywords — ranked by decline multiple

Rank	Keyword	Pre (n)	Post (n)	Count decrease	Decline multiple
1	Social media	6	1	−5	6.00x lower
2	Ambidexterity	5	1	−4	5.00x lower
3	Team learning	9	2	−7	4.50x lower
4	Exploitation	4	1	−3	4.00x lower
5	Exploration	4	1	−3	4.00x lower
6	Family firms	4	1	−3	4.00x lower
7	Organizational innovation	4	1	−3	4.00x lower
8	Performance	5	2	−3	2.50x lower
9	Product innovation	5	2	−3	2.50x lower
10	Innovation capability	4	2	−2	2.00x lower
11	Knowledge integration	4	2	−2	2.00x lower
12	Tacit knowledge	10	6	−4	1.67x lower
13	Innovation performance	6	4	−2	1.50x lower
14	Learning culture	6	4	−2	1.50x lower
15	Organizational learning	36	26	−10	1.38x lower

Note. Ranking based on Pre/Post decline multiple. Only keywords present in both periods are included. Highlighted rows = sharpest decline at least 5 times or more.

[Ambidexterity in KM - the organizational ability to simultaneously manage 2 distinct knowledge types: exploiting current knowledge for operational efficiency and exploring new knowledge for innovation].

Why "Social Exchange Theory" (SET) Exploded in KM-related research?

- **The "Relational Turn"**

KM research has shifted from managing databases to managing relationships. We are moving away from *how* knowledge is stored to *why* humans and AI choose to exchange it (Nakash & Bolisani, 2024).

- **Altered Motivations to Share:**

When AI provides instant answers, the "cost-benefit" of human sharing changes (Abbas et al., 2023).

SET explains the new calculation: "Why should I contribute my expertise if GenAI can replace me?" (ChatGPT, 2026)

- **Trust & Reciprocity :**

GenAI creates a "fairness" problem. SET is now the primary lens to study whether the exchange between humans, organizations, and AI systems is perceived as fair or extractive (Budhwar et al., 2023).

- **Reactivation of a Mature Theory :**

SET was established in 1958 by George Homans (Homans, 1958), but the "AI shockwave" made its core concepts—trust, risk, and reward—urgently relevant to explaining modern knowledge work.

Talent Management / TM

- **Talent management** refers to systematic practices for attracting, developing, deploying and retaining people with strategically valuable capabilities (Roman et al., 2022).
- Under AI-augmented knowledge work, **talent management** becomes more salient because organisations must decide how to reskill, redeploy and retain knowledge workers (Bankins et al., 2024).

Talent Management: Why it increases 7 times? - 1

- **AI literacy as a baseline capability**

The rise of AI-mediated knowledge work makes AI literacy—not just tool access—a core talent management concern (Chopra & Kaur, 2025).

- **Reskilling and redeploying knowledge workers**

As AI automates codification tasks, organisations must actively reskill, redeploy, and retain knowledge workers whose value lies in judgment, interpretation, and tacit expertise (Akbar & Anas, 2024).

- **Enterprise case**

AstraZeneca's enterprise-wide AI upskilling programme (12,000+ employees trained, five-tier capability model) shows talent management being operationalised as a KM priority.

★Five-tier Capability Model

Learners can progress through a tiered competency scale – Bronze, Silver, Gold, Platinum and Diamond - to build the AI skills and literacy that is right for them and their role. The programme offers a wide range of learning experiences from keynote lectures and lab sessions to reflection activities and strategic thinking workshops – encouraging our people to be curious, think critically, ask questions, speak up, and use AI in an informed and ethical way.

This programme will continue to evolve by providing upskilling opportunities in local languages to empower AstraZeneca employees globally.

Digital Transformation / DT ↑ 6.5x

- **Digital transformation** is defined as an organisation-wide process of integrating digital technologies into structures, processes, and knowledge infrastructures to improve how knowledge is captured, shared, and used (de Bem Machado et al., 2022).
- In the GenAI era, **digital transformation** can be more specifically defined as the reconfiguration of knowledge work through human–GenAI interaction, including changes in how knowledge is generated, validated, transformed, and applied (Brusco Pletsch et al., 2026; Cerchione et al., 2026).

Digital Transformation increase 6.5x

- **From "Support" to "Systemic Change":**
 - Pre-ChatGPT: Digital tools were seen as **background support** (e.g., digitalization, remote platforms).
 - Post-ChatGPT: Digitalization is now seen as the **core engine** that reshapes how knowledge is created, validated, and shared (Cerchione et al., 2026; Rezaei, 2025).
- **Strategic Urgency over Incrementalism**
 - ChatGPT moved the digital agenda from the IT department to the **Boardroom**.
 - It shifted the focus from "improving existing processes" to "reimagining the entire knowledge lifecycle" (Deloitte, 2024; Nahum et al., 2026).

Artificial Intelligence ↑ 6x

- **Artificial intelligence** is no longer treated merely as a background tool; it is positioned as an agent that drafts, summarises, retrieves and explains knowledge-like output (Alavi et al., 2024; Rezaei, 2025).
- Generative AI operates at the level of language and representation, raising questions about authorship, trust, validation and epistemic risk in KM (Hannigan et al., 2024).

Artificial Intelligence increase 6x

- **From "Invisible Infrastructure" to "Language Interface":**
 - Pre-ChatGPT, AI was largely "hidden" in back-end analytics and search algorithms, remaining a technical niche for specialists. Post-ChatGPT, AI gained a "voice" through natural language, moving from the server room to the daily workflow of every knowledge worker (Jarrahi et al., 2023).
- **AI as a "Knowledge Participant":**
 - Research has shifted from "How does technology support humans?" to asking "Can AI generate and validate organizational knowledge?" AI is no longer a passive "container" for knowledge; it has evolved into a co-author, synthesizer, and active decision-supporter (Yan et al., 2026).

Knowledge Workers ↑ 6x

- **Knowledge workers** are employees whose main contribution lies in producing, interpreting and applying knowledge, rather than in routine information processing (Grant, 1996; Nonaka, 1994).
- The post-ChatGPT rise of "knowledge workers" reflects renewed concern with who still creates value when AI handles parts of codification and articulation (Sumbal et al., 2024; Kaczorowska et al., 2024).

Reasons for "Knowledge workers" to increase 6.0X? - 1

Human judgement became the new bottleneck.

The problem is no longer only finding knowledge. It is now about understanding AI outputs, checking whether they are right, knowing who is accountable, and making sure the task still fits the worker's role and ability (Passlack et al., 2026).

Knowledge workers became the main site of AI's benefits and risks.

After ChatGPT, research asks a clearer question: **does GenAI make knowledge workers more creative and productive**, or does it also create anxiety, job insecurity, and skill dependence (Dong et al., 2025) ?

Reasons for "Knowledge workers" to increase 6.0X? - 2

港大社工系博士生一篇有關香港生育率低迷的論文，引用多篇不存在的文獻，懷疑相關文獻由人工智能（AI）虛構。期刊網站列出作者，還有社會科學院副院長葉兆輝等人。

Incident: A PhD student's paper on Hong Kong's declining fertility rate cited non-existent references, likely generated by AI. The student used AI to assist with referencing but failed to verify the citations.

Apology: Prof. Paul Yip (co-author) took responsibility as corresponding author and apologized for the oversight. The content itself wasn't fabricated, but the citations were incorrect. The paper passed peer review.

Correction: The journal accepted the explanation and re-uploaded the corrected version in a few days. The student took an AI literacy course to prevent future errors.

Reasons for "Knowledge workers" to increase 6.0X? - 3

The "cognitive paradox" of AI - 1

Introduction

Artificial intelligence (AI) is rapidly transforming learning through unparalleled levels of personalization, efficiency, and scalability (Govea et al., 2023; Mahmoud and Sørensen, 2024). AI-based technologies such as adaptive learning systems and intelligent tutoring systems are revolutionizing traditional pedagogical paradigms as they individualize instruction to the needs of particular learners (Alawneh et al., 2024). While these advances have the potential to enhance learning, they also raise significant questions about their implications on the cognitive development of students, particularly in critical thinking, problem-solving, and recall. Among the challenges is determining whether AI is an enabler of deep learning or inadvertently induces cognitive dependency—a cognitive offloading effect (Grinschgl and Neubauer, 2022; Kim et al., 2024).

This paper explores AI integrated education using Cognitive Load Theory (Schnotz and Kürschner, 2007) and Bloom's Taxonomy (Shaikh et al., 2021), the study examines the influence of AI on learning processes and cognitive elements such as cognitive engagement, retention, and higher-order thinking. Optimizing learning pathways is a vast area of study about how AI gets to these long-term cognitive trade-offs and ethical challenges, much less so. As AI is increasingly integrated into learning systems around the world, there is a pressing need to comprehend how it may be utilized to enhance learning potential without jeopardizing fundamental cognitive capabilities. Here we will introduce an end-to-end framework that will allow to critically analyze in which ways, and to what extent, AI will be beneficial (or detrimental) to the learning process; ensuring that it will always be employed to maximize the best potential for learning without undermining our most basic cognitive function.

Jose, B., et al. (2025).

[Paradox - An apparently self-contradictory statement, which can only be true if it is false, and vice versa]

[Inadvertently - Unintentionally; because of an oversight.]

The "cognitive paradox" of AI - 2

Cognitive offloading and AI's impact on cognitive skills

Cognitive offloading refers to the utilization of external aids to achieve cognitive tasks (Risko and Gilbert, 2016). While AI-powered tools certainly make it easier, they also reduce the opportunity for active recall and problem-solving, which are essential components of cognitive development (Çela et al., 2024; Grinschgl and Neubauer, 2022).

Empirical evidence on AI's cognitive impact

Memory retention

A study by Bai, Liu, and Su examines AI-based tools like ChatGPT and their impact on memory retention. While AI enhances personalized learning, excessive reliance may reduce cognitive engagement and long-term retention (Bai et al., 2023). Similarly, Akgun and Toker studied 73 information science undergraduates at a Pennsylvania university. Participants were divided into two groups: one engaged in pretesting before using AI, while the control group used AI directly. Results showed that pretesting improved retention and engagement, but prolonged AI exposure led to memory decline (Akgun and Toker, 2024). These findings suggest AI enhances accessibility but may weaken retention if overused. To maximize benefits, AI should support rather than replace human-driven learning strategies.

How can we help students use GenAI properly? - 1

Assessment: Group Project

A general guideline on the use of GenAI tools:

In order that students can exercise (and perhaps enhance) their critical thinking abilities when working on this assignment, students are expected to always try to exhaust their own abilities first when tackling various project tasks. They can then make use of all sorts of GenAI to work with them to enhance the quality of their work. Here, it is suggested that students should take:

- Step 1: Students will first complete each task without using GenAI tools (Put in Appendix 1)
- Step 2: Students will ask GenAI tool(s) to comment on their work produced in Step 1 (Put in Appendix 2)
- Step 3: Following the comments from GenAI tool(s), students will revise their work on their own using their own abilities (Put in Appendix 3)
- Step 4: Students will ask GenAI tool(s) to help perfect their writing - both content and language (including grammar checks)

Students will include artefacts from all 4 steps in the appendices (can be a screenshot) of their group report.

Step 1: Students will first complete each task without using GenAI tools

Step 3: Following the comments from GenAI tool(s), students will revise their work on their own using their own abilities

You will fail the assignment if these are not done!!

How can we help students use GenAI properly? - 2

Assessment: Group Project - eg “How I walk my talk”

第一幕：「有教無類」世界教育大獎的頒獎典禮

【牆上投影一張嘴巴，是為AI旁白】

AI旁白 歡迎蒞臨2025年「有教無類」世界教育大獎頒獎典禮！今晚，我們將見證教育的奇蹟，聆聽希望的樂章，感受知識的魔法！

首先，先讓我為大家介紹今晚兩位星級主持人。

【背景音樂響起：Pride in your eyes - just music
我的驕傲 容祖兒（卡拉伴奏版）】

【Tim 從後台行到台前，一邊行，一邊唱：
Pride in your eyes 為我改寫下半生
眉目裡 找到我 失去的 自信心
才明白 被愛的 能活得這樣勇敢】

【燈光聚焦Tim，音樂漸強】

【牆上投影：Tim - 熱情、具國際視野，說話具行動力與願景感。】

AI旁白 這位是男主持人Tim，今年30歲，蝦霸大學教育學碩士畢業，現任職於聯合國教育部門，致力推動全球『快樂學習學校』計畫。

Polly 【從後台行到台前，邊行邊唱】
See me fly, I am proud to fly up high
不因氣壓搖擺 只因有你擁戴
Believe me I can fly I'm singing in the sky
假使我算神話 因你創更愉快

【牆上投影：Polly - 溫柔、學術氣息濃厚，說話細膩、富情感】

AI旁白 這位是女主持人Polly，今年28歲，獲得康橋大學教育學博士學位，現任牛頓大學教育系助理教授。她醉心於研究「健康教育」，尤其擅長運用音樂與歌唱療法幫助長者，令他們能夠越活越年輕、越健康、越快樂。

Step 1: Students will first complete each task without using GenAI tools (Put in Appendix 1)

How can we help students use GenAI properly? - 3

eg “How I walk my talk”

Grok 3’s comments:

感謝您分享這部音樂劇《汀教授 - 教育魔術師》的詳細內容！這是一部非常有深度的作品，融合了教育、信仰、勵志和個人成長的主題，並透過劇情和音樂展現了汀教授從問題少年到教育先驅的蛻變歷程。以下是我對這部音樂劇的評語與建議，包含內容和文筆上的改進建議，並對部分段落進行直接修改以提升表達效果。

整體評語：

- 主題明確且富有啟發性：**這部音樂劇以汀教授的成長故事為主軸，成功傳達了「有教無類」和「失敗乃成功之母」的教育理念。劇中從少年時期的迷失到信仰帶來的救贖，再到成為教育魔術師的過程，展現了個人奮鬥與教育的力量，令人感動。
- 結構清晰：**劇本分幕分場安排得當，從頒獎典禮切入，再回溯汀教授的童年、中學、大學及職業生涯，時間線清晰，過渡自然。
- 文化與時代元素豐富：**劇中融入了大量香港文化元素（如六合彩、Band 5學校、蘇格拉底書店等），以及跨世代歌曲（如《小時候》、《世界真細小》），增加了親切感和時代背景的真實性。
- 情感表達真摯：**無論是汀教授的低谷時期，還是他幫助學生的溫暖時刻，情感刻畫都十分細膩，能引發觀眾共鳴。
- 科技與創新元素：**引入AI旁白、虛擬Avatar、Kahoot互動等現代元素，讓音樂劇更具時代感和互動性，符合當代觀眾的期待。

改進建議：

- 文筆精簡與對白自然化：**
 - 目前劇本中部分對白和旁白過於冗長，特別是AI旁白的解說部分，容易讓觀眾或讀者感到信息過載。建議精簡描述，保留核心信息，讓劇情更緊湊。
 - 對白中部分用詞顯得書面化或過於正式（如「我深感自豪」），與角色年齡或情境不符，建議改為更口語化、自然的表達方式。
- 角色深度與衝突強化：**
 - 雖然汀教授的成長過程非常詳細，但部分配角（如飛龍、蝦蟆）的性格和動機描寫較為單薄，建議增加他們的內心掙扎或背景故事，讓觀眾更能理解他們的行為。
 - 劇中衝突（如汀教授與江教授的矛盾）可以更深入刻畫，增加緊張感，讓解決方案顯得更有意義。
- 音樂與情節的結合：**
 - 目前曲目選擇豐富，但部分歌曲與情節的關聯性不夠明顯。建議在選曲或歌詞上更貼合當下場景的情感或主題，例如在低谷時選用更沉重的旋律，在轉折時選用更激昂的歌曲。
- 舞台效果與視覺化建議：**
 - 劇本中大量使用牆上投影（AI生成影片、字幕等），這是很好的視覺化手段，但過多可能分散觀眾注意力。建議挑選關鍵情節使用投影，其他部分透過演員表演或舞台設計呈現。
- 文化與信仰平衡：**

5. 文化與信仰平衡：
劇中信仰（基督教）元素佔比頗重，雖然這是汀教授轉變的重要因素，但過多宗教內容可能讓部分觀眾感到疏離。建議在表達信仰救贖的同時，融入更多普世價值觀（如毅力、希望），以吸引更多廣泛的觀眾群體。

具體修改示例：

以下是我對部分段落的直接修改，旨在加強文筆的流暢性、情感表達和對白的自然性。

第一幕：「有教無類」世界教育大獎的頒獎典禮

原版：

AI旁白
歡迎蒞臨2025年「有教無類」世界教育大獎頒獎典禮！今晚，我們將見證教育的奇蹟，聆聽希望的樂章，感受知識的魔法！
首先，先讓我為大家介紹今晚兩位星級主持人。
【背景音樂響起：Pride in your eyes - just music 我的驕傲 容祖兒（卡拉伴奏版）】

修改版：

AI旁白
歡迎來到2025年「有教無類」世界教育大獎頒獎典禮！今晚，讓我們一起見證教育的奇蹟，感受希望的旋律，體驗知識的神奇力量！
首先，有請今晚的兩位星級主持人閃亮登場！
【背景音樂響起：Pride in Your Eyes - 容祖兒（卡拉伴奏版）】

修改理由：

- 「蒞臨」改為「來到」，更口語化，符合旁白作為引導觀眾的語氣。
- 「聆聽希望的樂章」改為「感受希望的旋律」，與音樂劇主題更契合，且避免重複「奇蹟」一詞。
- 簡化介紹主持人的用詞，增加期待感（如「閃亮登場」），讓語氣更熱情。

Step 2: Students will ask GenAI tool(s) to comment on their work produced in Step 1 (Put in Appendix 2)

第二幕 第一場：Tim七歲時對書本產生了恐懼

原版：

Tim（唱）
🎵 爸爸你看這本書，圖畫好精彩！
故事像魔法，讓我笑開懷！ 🎵
Tim爸爸（語氣漸冷）
【皺眉，冷笑】這種沒用的東西是誰給你看的？
Tim（語氣轉弱）
【怯怯地】是……媽媽買給我的……
Tim爸爸（激動唱）
🎵 我年輕時也只看漫畫，結果呢？
現在只會賣報紙和漫畫，人生像笑話！
我不要你重蹈覆轍，別再浪費時間！ 🎵

修改版：

Tim（唱，興奮）
🎵 爸爸快看這本書，圖畫真精彩！
故事像魔法，逗得我哈哈笑！ 🎵
Tim爸爸（語氣冷淡）
【皺眉，輕哼】這種沒用的垃圾書，誰給你看的？
Tim（聲音顫抖）
【低頭，小聲】是……媽媽買的……
Tim爸爸（憤怒唱）
🎵 我年輕時就愛看這些，結果怎樣？
現在賣報紙謀生，人生成笑話！
我不許你走老路，別再浪費時間！ 🎵

修改理由：

- Tim的歌詞中加入「快看」和「哈哈笑」，更符合七歲孩童的活潑語氣，增加情感感染力。
- Tim爸爸的用詞從「沒用的東西」改為「沒用的垃圾書」，更符合他對漫畫的輕蔑態度，同時語氣更尖銳，突出父子間的衝突。
- 「我不要你重蹈覆轍」改為「我不許你走老路」，語氣更強硬，符合父親的憤怒情緒。

How can we help students use GenAI properly? - 4

eg “How I walk my talk”

Based on the comments from the GenAI (Grok 3), I revised my musical script.

Step 3: Following the comments from GenAI tool(s), students will revise their work on their own using their own abilities (Put in Appendix 3)

Green Innovation ↑ 5x

- **Green innovation** refers to innovation that explicitly links knowledge and technology development to environmental sustainability and responsible outcomes (Wu et al., 2025).
- Its rise in KM keywords indicates growing interest in how knowledge, innovation and sustainability jointly shape competitive advantage (Shrivastav et al., 2025).

Green Innovation 5x increase

- **The Convergence of Agendas:**

- Pre-ChatGPT: KM was focused on **Efficiency and Learning**.
- Post-ChatGPT: KM is increasingly asked to optimize for **Sustainability (ESG)**.
- AI has become the "bridge" connecting digital knowledge systems with environmental goals (Gomes et al., 2024).

- **Lexical Consolidation:**

- Older, broader terms like "CSR" or "Eco-practices" are being replaced by the more specific and output-oriented label: "**Green Innovation**" (Zhang et al., 2025).

- **AI as the "Green Accelerator":**

- KM research is shifting toward how GenAI can recombine vast, complex environmental datasets to accelerate sustainable breakthroughs. This includes the rapid synthesis of green tech patents and the real-time mobilization of ecological knowledge to drive competitive advantage (Jiang et al., 2024).

Digitalization (new) change from 0-7 times

- Digitalization is the process of using digital technologies to drive business model innovation and organizational process transformation, rather than merely converting information into digital form (Reis et al., 2020).
- Prior KM work saw technology mainly as support infrastructure; post-ChatGPT research increasingly treats digitalization as a condition that shapes what becomes visible, codifiable and actionable (Shrivastav et al., 2025).

Digitalization - Reasons for it to change from 0-7 times

- **From "External Support" to "Embedded Cognition":**
Pre-ChatGPT, technology was treated as a separate container for knowledge. After 2023, "Digitalization" emerged to describe how AI has "melted" into the actual thinking process—it is no longer a tool we use, but a digital logic embedded in how we draft and synthesize (Bawack et al., 2025).
- **A Shift from Crisis Adaptation to Routine Automation:**
- The surge from 0 to 7 reflects a move away from "emergency remote work" discourse (COVID-era) toward the systematic "Digitalization" of the entire knowledge lifecycle, where AI-enabled routines become the new standard for organizational capability (Mikalef et al., 2026).
- **The "Middle-Ground" Terminological Need:**
Scholars adopted "Digitalization" as a necessary mid-level term. While "Digitization" is too technical and "Digital Transformation" is too broad/strategic, "Digitalization" precisely captures the daily, process-level automation of knowledge work enabled by GenAI (Dwivedi et al., 2024).

Knowledge Hoarding (new)

- **Knowledge hoarding** refers to the deliberate retention of knowledge that could be shared with others, often to preserve personal advantage, control, or job security (Thomas, 2025).
- As a new post-ChatGPT keyword, 'emergence' suggests that defensive non-sharing is increasingly treated as a core KM issue, shaped by psychological security, cohesion, and power-related workplace conditions (Cheng et al., 2024)

Knowledge Hoarding

- **Expertise Pressure & Defensive Withholding**

As GenAI exposure can make employees more protective of what they uniquely know, increasing knowledge hiding as a self-protective response (Chen et al., 2026; Liu et al., 2025).

- **Job insecurity shifts behaviour from sharing to withholding.**

New KM evidence shows that perceived AI threat and AI-induced job insecurity are linked to knowledge hiding, partly through anxiety and other defensive reactions (Lin et al., 2026; Zhong et al., 2026).

- **The Dark-Side Reframing**

More broadly, recent KM research is no longer confined to optimistic knowledge-sharing models. Instead, it increasingly treats knowledge sharing, hiding, hoarding, and sabotage as interconnected knowledge behaviours that can coexist and shift under psychological, organizational, and technological pressures (Thomas, 2025; Lin et al., 2026; Liu et al., 2025).

Innovative Work Behavior (new)

- “Innovative work behavior” refers to employees’ intentional generation, promotion, and implementation of novel ideas that enhance organizational competitiveness and sustainability (Dongxian & Batool, 2024; Parveen & Reddy, 2024)
- Recent studies suggest that GenAI supports employee innovation not simply through frequent use, but through stronger sensing and evaluation capabilities, as well as better knowledge transfer, resource acquisition, and job satisfaction (Held & Heubeck, 2025; Zhang et al., 2026).

Innovative Work Behavior (IWB): From "Bonus" to "Baseline"

Origin (Early 2000s):

- Rooted in individual psychology (Janssen, 2000), focus was on "Extra-role" behaviors.

The "Old Era" (2011 – 2022): Innovation was a Choice

- **The Milestone:** Andreeva & Kianto (2011) introduced IWB to the *Journal of Knowledge Management*.
- **The Logic:** Innovation was a "**Performance Bonus**." If employees were innovative, the company became more competitive and made more profit.
 - *Human Role:* To be a "better" content creator than the person in the next office.

The "AI Era" (2023 – 2026): Innovation is a Necessity

- **The Shock:** Generative AI can now handle all "Predictable" tasks (drafting, coding, summarising)(Brynjolfsson et al., 2025)
- **The New Logic:** Innovation is now a "**Survival Kit**."
 - If your work behavior is predictable, you are **Replaceable** by an algorithm.
 - *Human Role:* To be a "curator" who does what AI *cannot*—breaking rules and connecting unrelated dots (Butollo et al., 2025).

How can we be innovative? - 1

2025-26S1 EDS6020 (01-)

2025-26S1 EDS6020 (01-) CREAT, INNOV ENTREP

2025-26S1 EDS6020 01- 83415

Teacher: CHU Kai Wah

Relationship between creativity, innovation and entrepreneurship

How can we be Innovative-2

- **21st Century Skills – 4Cs**
 - Critical Thinking – unique solutions
 - Creativity – outside-the-box ideas
 - Collaboration – teamwork spirit
 - Communication – persuasive sharing

© 2019, Battelle for Kids. All Rights Reserved.

How can we be Innovative-3

- **Innovative Mindset** (Catmull, 2025)
 - Failure is an investment in the future
 - Protect the new (safeguard fresh ideas)
 - Cherish good talent
 - Trust & Candor > Fear

Practical Behaviors:

- Continuous learning & trend tracking
- Digital-first thinking (AI, data analytics)
- Cross-disciplinary collaboration
- Value-driven innovation for users & society

Ed Catmull on His Definition of Creativity

Source: https://www.youtube.com/watch?v=P_-Ba4RHJY8

- **Takeaway:** Innovative employees are creative thinkers, collaborative communicators, ethical leaders, and entrepreneurial risk takers

Innovation Ambidexterity (new)

- **Innovation ambidexterity** denotes the ability to balance exploratory and exploitative innovation within a business function (Zhou et al., 2025; Tho et al., 2025).
- Under GenAI conditions, innovation ambidexterity captures how firms combine AI-enabled efficiency with exploratory innovation through knowledge integration, transformation, and governance (Al-Khatib et al., 2024; Li et al., 2025)

Innovation Ambidexterity (Emergence: 0 to 5 Post-ChatGPT)

- **Efficiency vs originality**

The keyword rose because GenAI created a new paradox: firms want faster innovation, but also need to protect originality and human contribution (Corvello, 2025; Hou et al., 2025).

- **More precise term**

AI made firms pursue efficiency and novelty at the same time, so innovation ambidexterity became a useful new label (Al-Khatib et al., 2024; Li et al., 2025).

- **From theory to daily practice**

What used to be a strategic tension became a practical AI management problem after ChatGPT (Li et al., 2025; Zhou et al., 2025).

"ChatGPT did not invent the tension between efficiency and novelty; it simply moved it from the boardroom to the daily workflow. We have shifted toward 'Innovation Governance' to defend against AI-driven homogenization." (Synthesis of Perplexity, DeepSeek & Copilot, 2026)

Social Media ↓ 6x

- **Social media** was previously a prevalent label for digitally mediated knowledge sharing through online communities and platforms (Yan et al., 2025).
- Its decline does not mean social media has become unimportant; rather, recent KM research shows that attention has shifted from platform-centred interaction to AI-enabled knowledge creation, validation, and application (Bose et al., 2025; Böhm and Durst, 2025; Rezaei, 2025)

Why "Social Media" Declined in KM-related research? - 1

- **From Human "Networks" to "Human–AI Knowledge Processes"**

The research focus has shifted from **human-to-human networks** (where knowledge circulates) to **human-to-AI processes** (how knowledge is generated and validated) (Jarrahi et al., 2023).

- **Topic: Maturation**

In recent literature, social media appears less as a standalone KM frontier and more as part of broader discussions of AI convergence, digital collaboration, and platform infrastructures (Alyoubi et al., 2024; Maldonado-Canca et al., 2024)

Note: This analysis was developed by triangulating insights from **Perplexity**, **DeepSeek**, and **Copilot**, with a final strategic synthesis performed by **ChatGPT 5.4**.

Why "Social Media" Declined in KM-related research? - 2

Ambidexterity ↓ 5x lower

- **Ambidexterity** is a strategic concept about balancing exploration and exploitation (Grant, 1996; Raisch & Krakowski, 2021).
- Ambidexterity is a strategic concept describing organizations' ability to balance exploration and exploitation simultaneously to sustain competitive advantage under uncertainty (Martínez-Román et al., 2025).
- Its relative decline suggests that this abstract label is being displaced by more AI-proximate terms such as innovation ambidexterity and human–AI collaboration (Zhou et al., 2025; Tho et al., 2025).

Ambidexterity 5x Lower (Post-ChatGPT)

- **Broader label, weaker fit**

After ChatGPT, ambidexterity became a less useful label in KM. Researchers more often wrote about human–AI collaboration and AI implementation challenges instead (Ali et al., 2025; Rezaei, 2025).

- **From balance to immediate problems**

The focus shifted from a broad question—how firms balance competing goals—to more immediate questions such as how to trust AI, use it well, and manage its risks in knowledge work (Ali et al., 2025; Rezaei, 2025).

- **Problem still there, wording changed**

So your result does not mean the old tension disappeared. It means the same issue is now described in clearer AI-era terms, rather than with the older word ambidexterity (Ali et al., 2025; Rezaei, 2025).

*"Ambidexterity did not become irrelevant; it became **too general**. In 2026, we no longer need 'labels' to describe balance—we need 'mechanisms' to manage the AI-driven knowledge explosion."* (Synthesis of Perplexity, DeepSeek & Copilot)

4 mechanisms of post-ChatGPT reorientation

To identify the most salient post-ChatGPT shifts, we selected keywords with a growth/decrease multiple above 5x.

People

Knowledge Workers ↑
Talent Management ↑
